Assignment: *Parser for* tinyC — Marks: *100*
Date posted: *Sep 5, 2024* — Submission deadline: *Sep 29, 2024, 23:59*

1 Preamble – tinyC

This assignment follows the phase structure grammar specification of C language from the International Standard **ISO/IEC 9899:1999 (E)**. To keep the assignment within our required scope, we have chosen a subset of the specification as given below. We shall refer to this language as tinyC.

The lexical specification of tinyC, also taken and abridged from the Standard, has already been discussed in an earlier assignment. The phase structure grammar specification is written using the common notation of language specifications as discussed in that assignment.

2 Phrase Structure Grammar of tinyC

1. **Expressions**

primary-expression:
- *identifier*
- *constant*
- *string-literal*
- (*expression*)

postfix-expression:
- *primary-expression*
- *postfix-expression* [*expression*]
- *postfix-expression* (*argument-expression-list*$_{opt}$)
- *postfix-expression* . *identifier*
- *postfix-expression* $->$ *identifier*
- *postfix-expression* $++$
- *postfix-expression* $--$
- (*type-name*) { *initializer-list* }
- (*type-name*) { *initializer-list* , }

argument-expression-list:
- *assignment-expression*
- *argument-expression-list* , *assignment-expression*

unary-expression:
- *postfix-expression*
- $++$ *unary-expression*
- $--$ *unary-expression*
- *unary-operator cast-expression*
- **sizeof** *unary-expression*
- **sizeof** (*type-name*)

unary-operator: one of
- & * + - ~ !

cast-expression:
- *unary-expression*
- (*type-name*) *cast-expression*

multiplicative-expression:
- *cast-expression*
- *multiplicative-expression* $*$ *cast-expression*
- *multiplicative-expression* / *cast-expression*
- *multiplicative-expression* % *cast-expression*

additive-expression:
multiplicative-expression
additive-expression + *multiplicative-expression*
additive-expression − *multiplicative-expression*
shift-expression:
additive-expression
shift-expression << *additive-expression*
shift-expression >> *additive-expression*
relational-expression:
shift-expression
relational-expression < *shift-expression*
relational-expression > *shift-expression*
relational-expression <= *shift-expression*
relational-expression >= *shift-expression*
equality-expression:
relational-expression
equality-expression == *relational-expression*
equality-expression ! = *relational-expression*
AND-expression:
equality-expression
AND-expression & *equality-expression*
exclusive-OR-expression:
AND-expression
*exclusive-OR-expression*ˆ*AND-expression*
inclusive-OR-expression:
exclusive-OR-expression
inclusive-OR-expression | *exclusive-OR-expression*
logical-AND-expression:
inclusive-OR-expression
logical-AND-expression && *inclusive-OR-expression*
logical-OR-expression:
logical-AND-expression
logical-OR-expression || *logical-AND-expression*
conditional-expression:
logical-OR-expression
logical-OR-expression ? *expression* : *conditional-expression*
assignment-expression:
conditional-expression
unary-expression assignment-operator assignment-expression
assignment-operator: one of
= *= /= %= += -= <<= >>= &= ˆ= |=
expression:
assignment-expression
expression , *assignment-expression*
constant-expression:
conditional-expression

2. **Declarations**

declaration:
declaration-specifiers init-declarator-list$_{opt}$;
declaration-specifiers:
storage-class-specifier declaration-specifiers$_{opt}$
type-specifier declaration-specifiers$_{opt}$
type-qualifier declaration-specifiers$_{opt}$
function-specifier declaration-specifiers$_{opt}$
init-declarator-list:
init-declarator
init-declarator-list , *init-declarator*
init-declarator:
declarator
declarator = *initializer*

storage-class-specifier:
extern
static
auto
register
type-specifier:
void
char
short
int
long
float
double
signed
unsigned
_Bool
_Complex
_Imaginary
specifier-qualifier-list:
type-specifier specifier-qualifier-list$_{opt}$
type-qualifier specifier-qualifier-list$_{opt}$
type-qualifier:
const
restrict
volatile
function-specifier:
inline
declarator:
pointer$_{opt}$ *direct-declarator*
direct-declarator:
identifier
(*declarator* **)**
direct-declarator **[** *type-qualifier-list*$_{opt}$ *assignment-expression*$_{opt}$ **]**
direct-declarator
[static *type-qualifier-list*$_{opt}$ *assignment-expression* **]**
direct-declarator **[** *type-qualifier-list* **static** *assignment-expression* **]**
direct-declarator **[** *type-qualifier-list*$_{opt}$ ***** **]**
direct-declarator **(** *parameter-type-list* **)**
direct-declarator **(** *identifier-list*$_{opt}$ **)**
pointer:
***** *type-qualifier-list*$_{opt}$
***** *type-qualifier-list*$_{opt}$ *pointer*
type-qualifier-list:
type-qualifier
type-qualifier-list type-qualifier
parameter-type-list:
parameter-list
parameter-list **, ...**
parameter-list:
parameter-declaration
parameter-list **,** *parameter-declaration*
parameter-declaration:
declaration-specifiers declarator
declaration-specifiers
identifier-list:
identifier
identifier-list **,** *identifier*
type-name:
specifier-qualifier-list
initializer:
assignment-expression
{ *initializer-list* **}**
{ *initializer-list* **, }**

initializer-list:
    designation$_{opt}$ *initializer*
    initializer-list **,** *designation*$_{opt}$ *initializer*
designation:
    designator-list **=**
designator-list:
    designator
    designator-list designator
designator:
    [*constant-expression* **]**
    . *identifier*

3. **Statements**

statement:
    labeled-statement
    compound-statement
    expression-statement
    selection-statement
    iteration-statement
    jump-statement
labeled-statement:
    identifier **:** *statement*
    case *constant-expression* **:** *statement*
    default : *statement*
compound-statement:
    { *block-item-list*$_{opt}$ **}**
block-item-list:
    block-item
    block-item-list block-item
block-item:
    declaration
    statement
expression-statement:
    expression$_{opt}$ **;**
selection-statement:
    if (*expression* **)** *statement*
    if (*expression* **)** *statement* **else** *statement*
    switch (*expression* **)** *statement*
iteration-statement:
    while (*expression* **)** *statement*
    do *statement* **while (** *expression* **) ;**
    for (*expression*$_{opt}$ **;** *expression*$_{opt}$ **;** *expression*$_{opt}$ **)** *statement*
    for (*declaration expression*$_{opt}$ **;** *expression*$_{opt}$ *) statement*
jump-statement:
    goto *identifier* **;**
    continue ;
    break ;
    return *expression*$_{opt}$ **;**

4. **External definitions**

translation-unit:
    external-declaration
    translation-unit external-declaration
external-declaration:
    function-definition
    declaration
function-definition:
    declaration-specifiers declarator declaration-list$_{opt}$ *compound-statement*
declaration-list:
    declaration
    declaration-list declaration

3 The Assignment

1. Write a bison specification for defining the tokens of tinyC, and generate the required y.tab.h file.

2. Write a bison specification for the language of tinyC, using the above phase structure grammar. Use the flex specification that you had developed for the tinyC lex assignment (if required, you may fix your flex specification). Construct the **parse tree** that comes as an output of your sample input program, and store the parse tree in a human-readable format in the output file `output_`$roll1\_roll2$`.txt`.

3. While writing the bison specification, you may need to make some changes to the grammar. For example, some non-terminals like

   argument-expression-list$_{opt}$

   are shown as optional on the right-hand-side as:

   postfix-expression:
   postfix-expression **(** *argument-expression-list*$_{opt}$ **)**

   One way to handle them would be to introduce a new non-terminal, *argument-expression-list-opt*, and a pair of new productions:

   argument-expression-list-opt:
   argument-expression-list
   ϵ

   and change the above rule as:

   postfix-expression:
   postfix-expression **(** *argument-expression-list-opt* **)**

4. The names of your lex and bison files should be `tinyC2_`$roll1\_roll2$`.l` and `tinyC2_`$roll1\_roll2$`.y`, respectively. ***Neither the*** `.y` ***nor the*** `.l` ***file should contain the function*** `main()`. Write a separate file `tinyC2_`$roll1\_roll2$`.c` with the `main()` function to test your lexer and parser.

5. Prepare a Makefile to compile the specifications and generate the lexer and the parser. Also write a clean target to remove all the new files generated by make.

6. Prepare a test input file `input_`$roll1\_roll2$`.c` that will be used for testing all the rules that you have coded.

7. Prepare a tar-archive with the name `tinyC2_`$roll1\_roll2$`.tar` containing all the files (after cleaning), and upload to Moodle.

4 Credits

1. Specifications and testing: **70**

2. Main file: **10**
   No marks for Makefile, but a penalty of 20 marks for not including Makefile.

3. Test file: **20**
